ISTM6205 Team Project Proposal
Team Members:
Rakesh Singh, Haoran Zhang, Jiayi Zhang

Team Name:	Team 9
Project Goal and Key Deliverables:	Our goal is to develop a website which serves as a platform where people can hire web designers by their design style and wage and where freelance web developers can post their information and get hired. Key deliverables include: 1. A home page which has the website description (including average wages of designers, average turnaround time, number of freelance designers who are open for work) and simple examples of the styles available. 2. Each designers' introduction page 3. A web form to collect work inquiries 4. Some preview features supported by java
Challenges:	1. The idea in itself is challenging and we will cater a lot of road-blocks in materializing this idea 2. Our team has limited experience in programing and website designing 3. There may be challenges in building content for portfolio pages 4. Implementation of JS script and how it's coming into play in totality to fulfil the project requirement may be challenging 5. Developing and testing the previews

Improvements & Reviews								▓	
Final Version Completion									▓
Final Report & Project Completion									▓

Team Member 1 (Short Introduction with a Picture)	Hi - I am Rakesh Singh, I am from New Delhi, India. I landed in the USA this year (Jan-2021) with the objective of completing my masters at the George Washington University. This is my 3rd consecutive semester in MS of Information Systems Technology. Before enrolling in this program I was working with Accenture India as an I.T Program Manager. I will be graduating in May-2022 and the year 2021 has been proven as a steep learning curve in my career.
Team Member 2 (Short Introduction with a Picture)	Hi I am Haoran Zhang. I am from Wenzhou, China. I am currently a senior majoring in information systems from the School of Business. I was working in Beijing as a Global Innovation Interns last year, and six months in Shenzhen as an information system engineer. Currently, I am pursuing a Master Degree in Data Science and a Doctor's Degree in Artificial Intelligence in the future.

Team Member 3 (Short Introduction with a Picture)	 My name is Jiayi. I was born and raised in Beijing, China. I moved to the US by myself 6 years ago and did my Master's in Applied Economics at Georgetown. After graduation, I worked at the World Bank and then IMF for 6 years and have multiple publications in macroeconomic research. By pursuing an MBA, I hope to learn the private sector perspectives to make direct and sizable contributions to businesses. I recently started my dual degree in MSIST to keep up with technology updates and also because I believe the best insights are backed by data.
